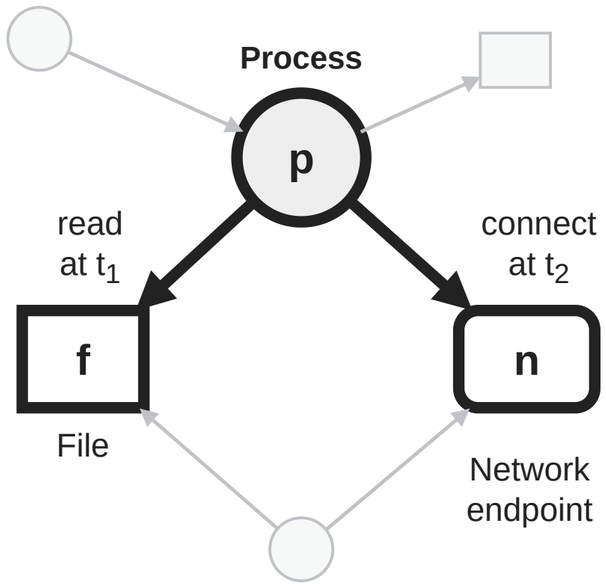
1 Identify context that influences the signal



2 Automatically distil context into rules

Illustrative context rule

The same process reads a file, then connects to an endpoint.

$$C_1(p, f, n) \leftarrow$$
$$\text{read}(p, f, t_1)$$
$$\wedge\ \text{connect}(p, n, t_2)$$
$$\wedge\ t_1 < t_2$$

3 Find the best integration

Rules + neural computation

During training
Guide model learning

At inference
Inform neural computation

Both
Use context in both phases
